

Information Technology Office

Information Technology Office shall be recognized as a trusted partner in supporting the University faculty to achieve its goal through excellence in information resources and technologies. We should be known for our excellent support and services, integrated and seamless systems, and innovative use of learning and enterprise technologies.

To support the functions of the faculty, FCCU provides a foundational infrastructure of reliable information technology resources on which other systems and services depend. These infrastructure services must maintain a superior level of performance and reliability in order to support the mission of the University while being cost-effective, scalable, and accommodating to changing needs and technologies. The Office strives to provide a reliable world class high-performance network, application communication and support infrastructure that provides anytime, anywhere access to services to all faculty, staff and students.

Core Functions:

The core function of Information Technology Office is to provide services to the faculty and administrative departments (who in turn help to support the faculty). In order to support these services, we ensure

- Building & Maintaining the Network
- Keeping Core Systems Up and Running
- Application Development, Implementation, System Security, Training, Maintenance and Database Administration
- Security surveillance and support
- Customer Support Services and communication running 24/7
- Business services and special projects
